A Discussion on Climate Change

S. Fred Singer

Climate is affected by both human and natural factors, with scientists arguing on both sides -- IPCC vs NIPCC.

IPCC has used the 'Hotspot' [1996] and the 'Hockeystick' [2001] arguments in support of Global Warming;

I will present contrary evidence and point to Global Cooling as a more serious problem.

Kenneth A. Haapala

The recent Paris Accord is unlikely to achieve its announced goal of reducing atmospheric CO₂ levels.

In addition to raising the costs of energy, and especially electric power, its financial aspects focus on massive wealth transfers from developed to developing countries.

Wednesday, 25. Mai 2016, 13:00 Uhr s.t.
