**Climate Change and the
Responsibility of Science**

Global Climate Change and the fact that humans are the essential driver are scientifically no longer in dispute. The picture which the Fifth Assessment Report of the IPCC (Intergovernmental Panel on Climate Change) draws is very clear in this respect. It essentially confirms earlier reports but also addresses new issues.

However, questions essential for societal decisions remain open. After some aspects of Climate Change based on the IPCC Report, some of these open issues will be discussed and possible consequences for scientists and scientific institutions addressed.

Dienstag, 11. November 2014, 14:00 Uhr

**1090 Wien, Währinger Str. 17, "Kavalierstrakt",
1. Stock, Victor-Franz-Hörsaal**
